THE MAKING OF HAWKINS PRESSURE COOKERS

Hawkins Cookers Limited has been in business since 1959. Today, it has two offices, three factories and about 800 persons working. It is the leader in the pressure cooker market in India and has exported its products since 1974 to various countries in each of the six continents of the world.

Worldwide, Hawkins has sold over 69 million units of pressure cookers and cookware by producing products of good design, good quality and considerable consumer benefit. Hawkins pressure cookers are listed by Underwriters Laboratories Inc., USA, an independent worldwide institution testing products for public safety.

Each pressure cooker made by Hawkins features an inside fitting lid. This design is inherently safer than conventional pressure cookers. To open any Hawkins cooker, you have to first lower the lid slightly into the body of the cooker; and that cannot be done until the steam pressure inside the cooker falls to a safe level. Thus Hawkins pressure cookers are pressure-locked for safety – like a jetliner door!

The Hawkins Company is well known for not compromising on quality and for continual product innovation. The most thorough research and development, the most careful selection of materials, the best manufacturing practices and the strictest quality control – all go into making pressure cookers which are trusted by the millions of families using them.

Each cooker is tested to be leak-proof. Along with a superior pressure regulating system, this ensures that Hawkins cooks quickest. Each pressure cooker comes individually packed in an attractive full-colour carton. Cookbooks/Instruction Manuals come free with each pressure cooker. All Hawkins pressure cookers are guaranteed for five years.

CLASSIC

5 LITRE
CODE: CL50

HAWKINS CLASSIC PRESSURE COOKER

The Classic is Hawkins' largest-selling, most popular range of pressure cookers – perhaps because of its attractive combination of features, benefits and price. Each Hawkins Classic features an inside-fitting lid. This design is inherently safer than conventional cookers. Thus Hawkins Classic pressure cookers are pressure-locked for safety – like a jet liner door!

This range was the first to be introduced by Hawkins and has been kept fresh and current by numerous innovations and improvements over the years. The latest improvement is a superior pressure regulating system that controls pressure to a narrower, more efficient range, reduces sprouting of frothy foods (such as *dal*) and is easier to insert and remove.

The safety valve is located under the lid handle bar so that when it operates the steam is safely deflected downwards. The gasket has minimum exposure to steam inside the cooker, does not rub every time the product is opened and closed – so lasts longer.

Stay-cool handles. Fixed sturdy pivot does not put pressure on the plastic handles as it is a part of the metal handle itself. Thus handles last longer. Recommended for use on gas stoves.

Recipe for Gajar ka Halwa (Carrot Pudding)

For 3 Litre Model: Yield 2½ cups: Serves 4

- red carrots** 6 large (2 lb 7 oz / 1.1 kg) peeled and grated
- milk** 2 tbsp + 1 tsp / 35 ml
- sugar** 1 cup + 3 tbsp / 240 g
- mava/khoya*** 1½ cups + 1½ tbsp / 240 g crumbled
- ghee** ¼ cup / 50 g
- almonds** 12 blanched, skins removed and sliced
- * whole dried milk

1. Put carrots and milk in cooker.
2. Close cooker. Bring to full pressure on high heat. Remove cooker immediately from heat. Release pressure with slight lifting of vent weight. Open cooker.
3. Place open cooker with carrots and milk on high heat. Add sugar. Cook till liquid dries up (about 13 minutes), stirring occasionally. Add mava and ghee. Cook till ghee shows separately (about 8 minutes), stirring constantly. Serve hot, garnished with almonds.

What is Hard Anodising?

Hard Anodising was first developed by Russian scientists to produce a metal surface tough enough for space travel. The same technology is now used to make the most advanced Pressure Cooker. Through a process of electrolysis at sub-zero temperature using a high intensity electric current, a 60 micron thick layer of aluminium oxide (Al_2O_3) is formed molecule by molecule as an integral part of pure, virgin aluminium. This process is called Hard Anodising. It produces a tough surface with wonderful properties for cooking.

- Thermal-efficient: heats fast and evenly
- Not spoilt by high heat
- 2.4 times harder than steel
- Non-toxic, non-staining, non-reactive with foods
- Will not pit, tarnish or corrode
- Stays looking new for years

Abridged Recipe for Vegetable *Biryani* (Rice Layered with Spicy Vegetables)

For 5 Litre Model: Yield 15 cups: Serves 7

**Pressure
Cooking
Time:
3 minutes**

1. Grind ginger, garlic, chillies into a paste with water.
2. Boil 5 cups water in cooker. Add salt, spices and rice. Boil 5 minutes without vent weight. Remove cooker from heat. Transfer rice to a colander and drain.
3. Heat one-fourth cup ghee in cooker 2 minutes. Add onions, ginger paste, cut potatoes and cauliflower. Fry 3 minutes. Add cut beans, carrots and peas. Fry 2 minutes. Add red chilli, cumin and garam masala powders, tomatoes, coriander and mint leaves, lemon juice and salt. Fry 3 minutes. Add *paneer*. Mix gently. Add 1 cup water. Stir.
4. Remove cooker from heat. Place rice on vegetables. Dribble saffron-milk over rice. Add hot ghee and cumin seeds.
5. Close cooker. Bring to pressure and cook 3 minutes. Remove cooker from heat. Allow to cool naturally. Release pressure. Open cooker.
6. Garnish with almonds and mint leaves. Serve hot with butter or curd.

Hawkins® BIGBOY™

HAWKINS BIGBOY PRESSURE COOKER

The Bigboy range has been specially designed to cook large quantities of food quickly and economically. It is most useful in restaurants, hotels, canteens in factories, hospitals, schools and colleges. Also, canteens in many civil or military government establishments are using the Hawkins Bigboy.

The 18 Litre and 22 Litre Bigboy Pressure Cookers have a pair of sturdy lifting handles attached to the sides of the pressure cooker for convenience in handling the heavy weight carried by such pressure cookers. The plastic handles of all Bigboy Pressure Cookers are made from reinforced fibreglass for extra strength. Similarly, all other components of Bigboy Pressure Cookers are made for heavy duty. A chain is attached to the vent weight to prevent loss in busy kitchens.

Recommended for use on gas or kerosene stoves. They may also be used on coal burning or firewood stoves provided a suitable gap is kept between the fuel and the bottom of the cooker.

FUTURA PRESSURE COOKER

A beautiful combination of form and function, Futura is the only pressure cooker in the world to have been displayed by The Museum of Modern Art, New York.

Futura cooks on average 46% faster than a microwave oven.

The beautiful, durable black finish given by 60 microns thick hard anodising has two benefits. It makes the pressure cooker absorb heat faster making it more energy-efficient. And the pressure cooker stays looking new for years.

The unique pressure regulating system gives you the convenience of finger-tip pressure release and prevents clogging of the steam vent. The double-thick base stays flat, heats evenly and is ideal for light frying before pressure cooking.

Suitable for gas, electric, ceramic and halogen. Induction compatible models available in 3 Litre and 5 Litre.
